This webpage presents data on COVID-19 cases with information on pregnancy status reported to CDC. COVID-19 is a nationally

notifiable disease and reporting cases to CDC is supported by routine case notification through the National Notifiable Diseases

Surveillance System (NNDSS), as well as resources provided through the CDC COVID-19 response.<br><br>As of March 2022, CDC

no longer recommends universal case investigation and contact tracing and recommends that health department jurisdictions

prioritize specific settings and groups at increased risk. In addition, a decreasing number of case reports include information

on pregnancy status. For these reasons CDC will stop reporting data on this page on July 19th, 2022.<br><br>

Information about findings from this data and about CDC's ongoing data collection efforts to better understand the impact of

COVID-19 during pregnancy can be found

These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs. Spread is more likely when people are in close contact with one another (within about 6 feet). It may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes. This is not thought to be the main way the virus spreads, but we are still learning more about this virus.</p><p>The virus that causes COVID-19 is spreading very easily and sustainably between people. Given new evidence on the B.1.617.2 (Delta) variant, CDC has updated the [guidance for fully vaccinated people](https://www.cdc.gov/coronavirus/2019-ncov/vaccines/stay-up-to-date.html). CDC recommends universal indoor masking for all teachers, staff, students, and visitors to K-12 schools, regardless of vaccination status. Children should return to full-time in-person learning in the fall with layered prevention strategies in place.

This webpage presents data
on COVID-19 cases with information on pregnancy status reported to CDC.
COVID-19 is a nationally
notifiable disease and
reporting cases to CDC is supported by routine case notification through the
National Notifiable Diseases
Surveillance System
(NNDSS), as well as resources provided through the CDC COVID-19
response.<br><br>As of March 2022, CDC
no longer recommends
universal case investigation and contact tracing and recommends that health
department jurisdictions
prioritize specific settings
and groups at increased risk. In addition, a decreasing number of case reports
include information
on pregnancy status. For
these reasons CDC will stop reporting data on this page on July 19th,
2022.<br><br>

### After quarantine

Watch for symptoms until 10 days after your last close contact with someone with COVID-19.

If you have symptoms, isolate immediately and [get tested](/coronavirus/2019-ncov/testing/diagnostic-testing.html).

### Quarantine in high-risk congregate settings

In certain congregate settings that have high risk of secondary transmission (such as correctional and detention facilities, homeless shelters, or cruise ships), CDC recommends a 10-day quarantine for residents, regardless of vaccination and booster status. During periods of critical staffing shortages, facilities may consider shortening the quarantine period for staff to ensure continuity of operations. Decisions to shorten quarantine in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into consideration the context and characteristics of the facility.

CDC's [setting-specific guidance](/coronavirus/2019-ncov/community/index.html) provides additional recommendations for these settings.

## <a id="iso"></a>Isolation

**Isolation** is used to separate people with confirmed or suspected COVID-19 from those without COVID-19. People who are in isolation should stay home until it's safe for them to be around others. At home, anyone sick or infected should separate from others, or wear a [well-fitting mask](/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html) when they need to be around others. People in isolation should stay in a specific "sick room" or area and use a separate bathroom if available. Everyone who has presumed or confirmed COVID-19 should stay home and isolate from other people for at least 5 full days (day 0 is the first day of symptoms or the date of the day of the positive viral test for asymptomatic persons). They should wear a mask when around others at home and in public for an additional 5 days. People who are confirmed to have COVID-19 or are showing symptoms of COVID-19 need to isolate regardless of their vaccination status. This includes:

People who have a [positive viral test](/coronavirus/2019-ncov/testing/diagnostic-testing.html) for COVID-19, regardless of whether or not they have [symptoms](/coronavirus/2019-ncov/symptoms-testing/symptoms.html) .

People with [symptoms](/coronavirus/2019-ncov/symptoms-testing/symptoms.html) of COVID-19, including people who are awaiting test results or have not

been tested. People with symptoms should isolate even if they do not know if they have been in close contact with someone with COVID-19.</li>

</ul>

### <h3>What to do for isolation</h3>

<ul>

<li>Monitor your <a

href="/coronavirus/2019-ncov/symptoms-testing/symptoms.html">symptoms</a>. If you have an <a

href="/coronavirus/2019-ncov/symptoms-testing/symptoms.html#emergency-medical-attention">emergency warning sign</a>&nbsp;(including trouble breathing), seek emergency medical care immediately.</li>

<li>Stay in a separate room from other household members, if possible.</li>

<li>Use a separate bathroom, if possible.</li>

<li>Take steps to <a

<li>Avoid contact with other members of the household and pets.</li>

<li>Don't share personal household items, like cups, towels, and utensils.</li>

<li>Wear a <a href="/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html">well-fitting mask</a>&nbsp;when you need to be around other people.</li>

<ul>

<li>You can end isolation after 5 full days if you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved (Loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation).</li>

<li>You should continue to wear a <a href="/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html">well-fitting mask</a>&nbsp;around others at home and in public for 5 additional days (day 6 through day 10) after the end of your 5-day isolation period. If you are unable to wear a mask when around others, you should continue to isolate for a full 10 days. Avoid people who have weakened immune systems&nbsp;or are <a href="/coronavirus/2019-ncov/need-extra-precautions/index.html">more likely to get very sick</a>&nbsp;from COVID-19, and nursing homes and other high-risk settings, until after at least 10 days.</li>

- If you continue to have fever or your other symptoms have not improved after 5 days of isolation, you should wait to end your isolation until you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved. Continue to wear a [well-fitting mask](/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html) through day 10. Contact your healthcare provider if you have questions.

- See additional information [about travel](/coronavirus/2019-ncov/travelers/index.html#do-not-travel).

- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until a full 10 days after your first day of symptoms.

If an individual has access to a test and wants to test, the best approach is to use an [antigen test](/coronavirus/2019-ncov/hcp/testing-overview.html)<sup>1</sup> towards the end of the 5-day isolation period. Collect the test sample only if you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved (loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation). If your test result is positive, you should continue to isolate until day 10. If your test result is negative, you can end isolation, but continue to wear a [well-fitting mask](/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html) around others at home and in public until day 10. Follow additional recommendations for masking and [avoiding travel](/coronavirus/2019-ncov/travelers/index.html#do-not-travel) as described above.

<sup>1</sup>As noted in the <https://www.fda.gov/medical-devices/coronavirus-disease-2019-covid-19-emergency-use-authorizations-medical-devices/in-vitro-diagnostics-euas-antigen-diagnostic-tests-sars-cov-2> class="tp-link-policy" data-domain-ext="gov">labeling for authorized over-the counter antigen tests:

  Negative results should be treated as presumptive. To improve results, antigen tests should be used twice over a three-day period with at least 24 hours and no more than 48 hours between tests.

Note that these recommendations on ending isolation **do not** apply to people who are moderately ill or very sick from COVID-19 or have weakened immune systems. See section below for recommendations for when to end isolation for these groups.

### <a id="no-symptoms"></a>Ending isolation for people who tested positive for COVID-19 but had no symptoms

You can leave isolation after 5 full days.

</li>If you continue to have no symptoms, you can end isolation after at least 5 days.</li>

<li>You should continue to wear a <a href="/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html">well-fitting mask</a> around others at home and in public until day 10 (day 6 through day 10). If you are unable to wear a mask when around others, you should continue to isolate for 10 days. <li>If you develop <a href="/coronavirus/2019-ncov/symptoms-testing/symptoms.html">symptoms</a> after testing positive, your 5-day isolation period should start over. <h3>Ending isolation for people who were moderately or very sick from COVID-19 or have a weakened immune system</h3>

<p><strong>People who are moderately ill from COVID-19</strong> (experiencing symptoms that affect the lungs like shortness of breath or difficulty breathing) should isolate for 10 days and follow all other isolation precautions. To calculate your 10-day isolation period, day 0 is your first

day of symptoms. Day 1 is the first full day after your symptoms developed. If you are unsure if your symptoms are moderate, talk to a healthcare provider for further guidance.

**People who are very sick from COVID-19** (this means people who were hospitalized or required intensive care or ventilation support) and **people who have weakened immune systems** might need to isolate at home longer. They may also require testing with a [viral test](/coronavirus/2019-ncov/testing/diagnostic-testing.html) to determine when they can be around others. CDC recommends an isolation period of at least 10 and up to 20 days for people who were very sick from COVID-19 and for people with weakened immune systems. Consult with your healthcare provider about when you can resume being around other people. If you are unsure if your symptoms are severe or if you have a weakened immune system, talk to a healthcare provider for further guidance.

[People who have a weakened immune system](/coronavirus/2019-ncov/vaccines/recommendations/immuno.html) should talk to their healthcare provider about the potential for reduced immune responses to COVID-19 vaccines and the need to continue to follow [current prevention measures](/coronavirus/2019-ncov/prevent-getting-sick/prevention.html) (including wearing a [well-fitting mask](/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html) and avoiding crowds and poorly ventilated indoor spaces) to protect themselves against COVID-19 until advised otherwise by their healthcare provider. Close contacts of immunocompromised people—including household members—should also be encouraged to receive all [recommended COVID-19 vaccine doses](/coronavirus/2019-ncov/vaccines/booster-shot.html) to help protect these people.

Isolation in high-risk congregate settings

In certain high-risk congregate settings that have high risk of secondary transmission and where it is not feasible to cohort people (such as correctional and detention facilities, homeless shelters, and cruise ships), CDC recommends a 10-day isolation period for residents. During periods of critical staffing shortages, facilities may consider shortening the isolation period for staff to ensure continuity of operations. Decisions to shorten isolation in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into consideration the context and characteristics of the facility. CDC's [setting-](/coronavirus/2019-ncov/community/index.html)

specific guidance

This CDC guidance is meant to supplement—not replace—any federal, state, local, territorial, or tribal health and safety laws, rules, and regulations.

Recommendations for this situation depend on your vaccination status:

- If you are not up to date with your COVID-19 vaccines**, you should:
  - [Quarantine](/coronavirus/2019-ncov/your-health/quarantine-isolation.html) throughout the isolation period of any infected person that you live with.
  - Continue to quarantine until 5 days after the end of isolation date for the most recently infected person that lives with you. For example, if the last day of isolation of the person most recently infected with COVID-19 was June 30, the new 5-day quarantine period starts on July 1.
  - Get tested at least 5 days after the end of isolation for the most recently infected person that lives with you.
  - Wear a [well-fitting mask](/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html) when you are around any person with COVID-19 while that person is in isolation.
  - Wear a [well-fitting mask](/coronavirus/2019-ncov/prevent-getting-sick/about-face-coverings.html) when you are around other people until 10 days after your last close contact.
  - [Isolate](/coronavirus/2019-ncov/your-health/quarantine-isolation.html#iso) immediately if you develop [symptoms of COVID-19](/coronavirus/2019-ncov/symptoms-testing/symptoms.html) or test positive.
- If you are [up to date](/coronavirus/2019-ncov/vaccines/stay-up-to-date.html) with COVID-19 your vaccines, you should:
  - Get tested at least 5 days after your first exposure. A person with COVID-19 is considered infectious starting 2 days before they developed symptoms, or 2 days before the date of their positive test if they do not have symptoms.
  - Get tested again at least 5 days after the end of isolation for the most recently infected person that lives with you.

For example, if the last day of isolation for the person most recently infected with COVID-19 was June 30, the new 10-day period to wear a well-fitting mask indoors in public starts on July 1.

reporting cases to CDC is supported by routine case notification through the
